

Growing Steadily On A Quality Foundation

Since 1976, Salter Labs has positioned itself to approach both the hospital and home care markets with products reflecting both innovation and exceptional quality.

From the designer's desk to the loading dock Salter people are satisfied with nothing less than excellence in the products we offer. We truly believe that *quality care begins with quality products.*

This commitment has led to a new facility and the latest in high tech manufacturing equipment, all focused on keeping pace with the increased demand for products that not only excel in quality, but are unique in design characteristics.

At Salter, we engineer products to fit better and to last longer, while keeping a keen eye on helping contain the ever-rising cost of health care. We do it through creative design and use of superior quality, and longer lasting materials.

We invite you in the hospital or in the home care setting to benefit from this exceptional array of products, each of which reflects the same high level of quality that has always been synonymous with the name Salter.

Salter Labs is a ISO 9001/EN 46001 registered facility.
